

Painters Pole Antenna Mast Assembly

Here are a couple of pictures of the PP push up mast assembly I put together to see what was needed to make use of the PP.

As you can see in the photos, the assembly is rather easy to construct. On the conduit hanger I substituted a wing nut to make disassemble easier. I have about \$25 invested in the PP and assembly. This does not include the antenna and coax. The second photo shows the assembly without the antenna and coax attached.

The conduit hanger could be moved to the threaded section if the threads can be protected.

Hope this helps with you equipment setups.
